Specification

1. The divisional information amendment to the beginning of the specification should be amended again to include the patent numbers of the parent patents.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 7 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is not fully understood toward what the terminal voltage drop refers in relation to the parasitic diode. Claim 7 is indefinite. Clarification is required.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2)

5. Claims 5-7 are rejected under 35 U.S.C. 102(e) as being anticipated by Toyoyama et al. (USPN 6,469,568).

Fig. 6 discloses a transistor 31 and a voltage detector 51/52/35 as recited in claim 5.

The bias voltage V_{subp} is substantially equal to but slightly less than the terminal voltage due to the voltage drops through transistor 42 and 43 as recited in claims 6 & 7.

6. Claims 5-7 are rejected under 35 U.S.C. 102(e) as being anticipated by Houston (USPN 6,429,684).

Fig. 6 discloses a transistor (the gate of which is coupled to IN) and a voltage detector (transistors coupled to $/IN$) as recited in claim 5. Note: additional circuitry would inherently exist for relating the signals IN and $/IN$.

The bias voltage (at the backgate of the transistor) is substantially equal to but slightly less than the terminal voltage due to the voltage drops through the voltage detector as recited in claims 6 and 7.
